

MILL STREET

MASTER PLAN LIBERTY, MISSOURI

Streetscape Design Objective:

The Proposed Mill Street design objective is to provide an attractive, functional and safe environment for all types of transportation. Aesthetic design solutions will reinforce the functions of the street and enhance the value of adjacent buildings and homes. These images identify the proposed character and spatial quality of the proposed street and its associated amenities.

The Benefits of Roundabouts:

Roundabouts are attractive additions to our cities. Instead of widening a road to create storage for vehicles waiting at red lights, roundabouts provide a continuous flow of traffic thus reducing delays for all users. This also allows the use of fewer lanes between intersections. Roundabouts have proven to reduce the number of serious accidents at intersections by eliminating direct impacts from vehicles running stop signs and red lights. Roundabouts are bicycle and pedestrian friendly because they slow traffic down and are easy to use. They provide opportunities for aesthetic enhancements such as fountains, public art and landscaping.
